## FACTS ABOUT OUR BUSINESS

THE fact that our goods and our methods have been favorably received by the trade gives us this pleasing opportunity to thank our business friends for their co-operation and loyalty. An endorsement of their judgment in co-operating with us is doubtless given by our successful growth. We show it graphically in the plotted sales curve below:

Our modern, heavy fireproof factory (see opposite page) is interesting to buyers who want a sure and reliable source of supply.

We offer and we seek favoritism in trade, not the kind that closes its eyes to price and quality, but the discerning favoritism that takes account of character and value in man and in merchandise.

"Our latch-string is always out" for our active friends. To our passive friends, it is also out that they may judge whether or not it will be comfortable and profitable to co-operate with us. We offer you the largest line of our kind of goods in the world with security and surety of supply in any quantity. We offer a successful line that has been proved in the crucible of practical use and at prices which return only a staple-goods profit, without which security of supply could not exist. Lastly we offer you success in selling our line if you are minded to co-operate with us. No case of failure is known to us where co-operative methods have been used.

We offer you the grip of business fellowship.

Yours sincerely,

*The Brasscrafters* TRADE MARK

## FACTS ABOUT MIRRORS

**R**EAL mirrors, with metal frames, suited to the Bath Room, were unknown until eighteen years ago when we offered to the trade practically perfect metal framed mirrors. The problems of quality, method of manufacture and assembling, were difficult; we solved them. Our seamless frames are faultless in material, strength and finish.

We use only the most carefully selected imported French Crystal Glass, except when a supply is unobtainable, in which event the change is clearly indicated by the guarantee label on each mirror.

The frames and mirror plates are assembled in a perfect mechanical way, providing for unequal expansion of metal and glass. The backs are of metal and moisture proof.

Our frames are free from joints, cracks or corners, and are therefore easily kept clean and sanitary. Moreover, they are elegant and everlasting. Every mirror is a GEM, when it bears our trade mark.

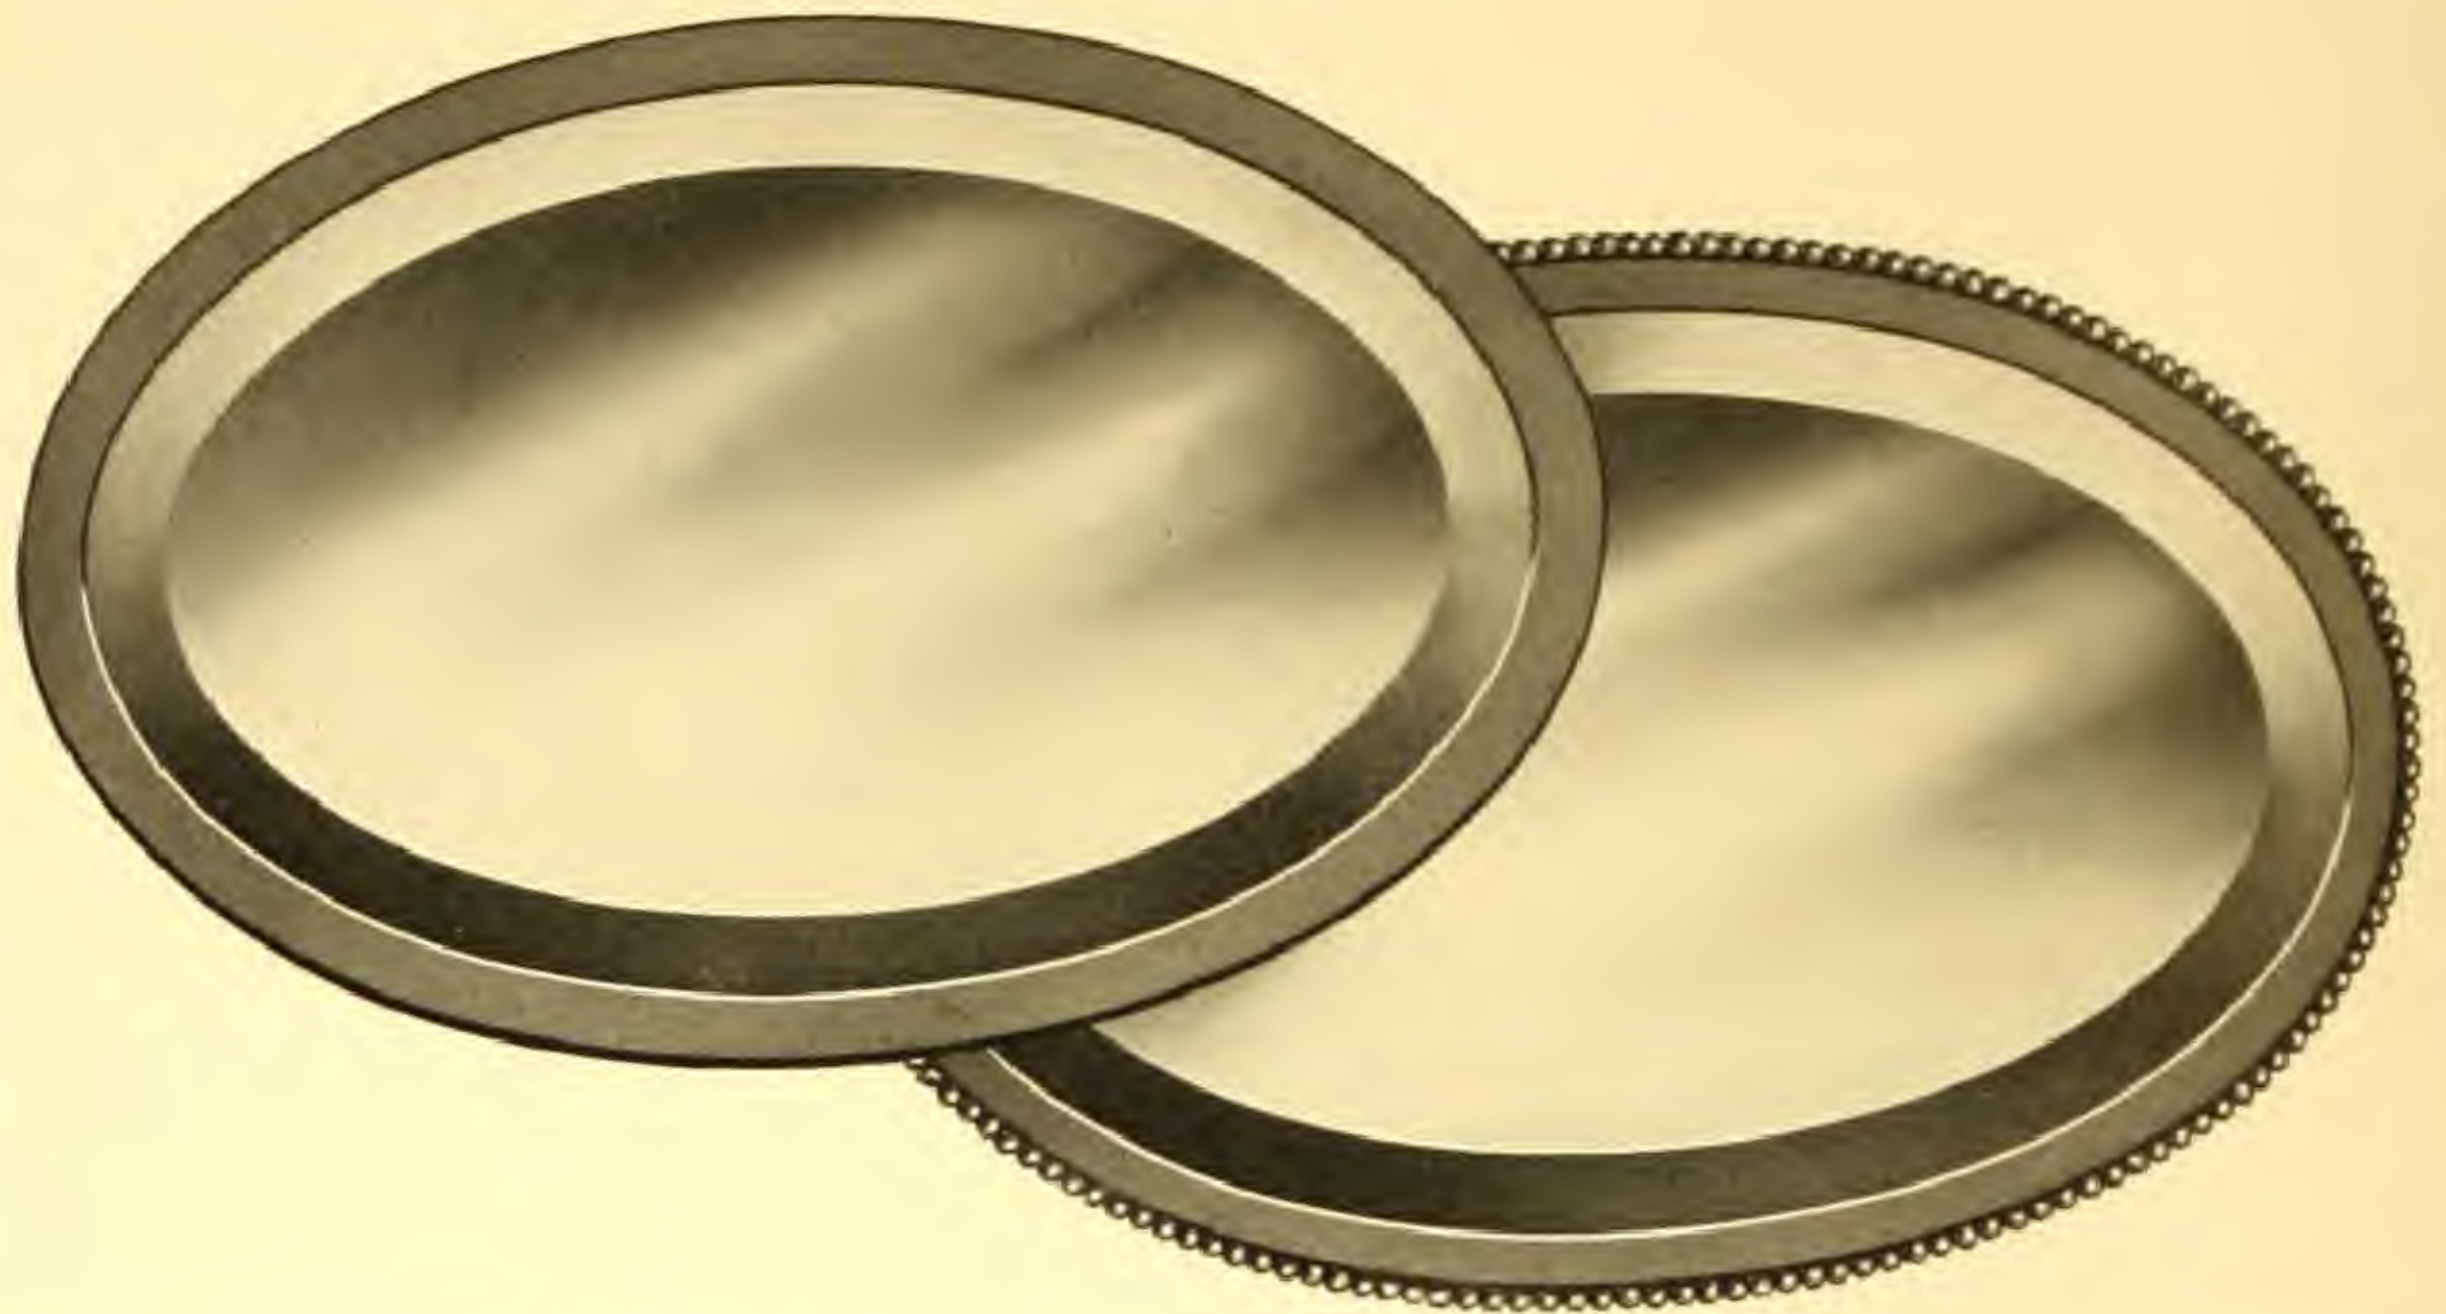

In addition to our regular series of Mirrors as shown herein, we make special sizes for any location, in a variety of forms of Silver Soldered Frames, all with metal backs, moisture-proof plates, and guaranteed.

# Mirrors—Seamless Brass Frames, Nickel Plated

 Body finish, inside and outside, everlasting white "ENAMOID."  
 The shelf rests are securely fixed, but instantly adjustable. (See sectional cut, page 66.)

## FACTS ABOUT SOAP DISHES

OUR soap dishes illustrated on the following pages are the best yet produced. Made of extra heavy solid brass heavily nickel plated, and strong enough to withstand the use of a lifetime. The shapes are neat, symmetrical, and the most natural for the purpose. The drainers are heavy, strong, of the proper depth, and not easily displaced or injured. They are so constructed that the soap will dry quickly and not adhere thereto, while in nearly all other soap dishes they are frail, shallow, easily displaced and made useless. Taken as a whole, our soap dishes are the most artistic, practical, easily cleaned and therefore the most sanitary yet produced.

# Facts About Our Indestructible Wire and Rod Joints

*Patented November 26, 1912*

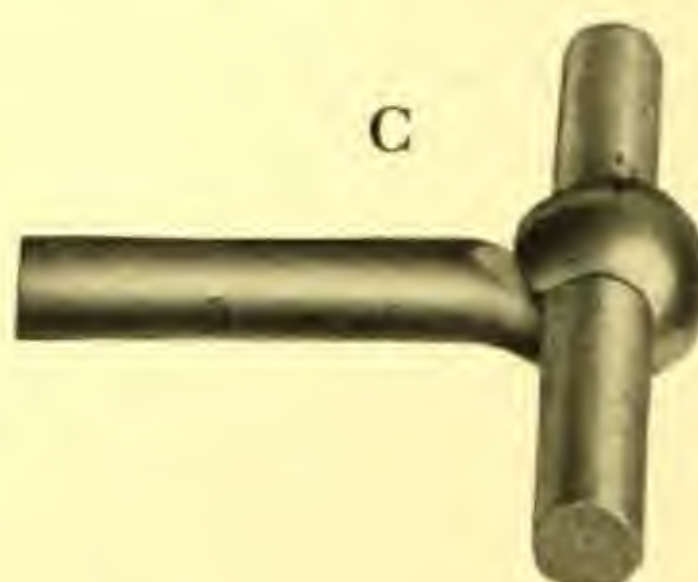

Heretofore, all plain T and ball joint patterns of rod and wire goods have been made by drilling small balls or the wires themselves, and inserting wires in the balls or in the cross wires, then attempting to solder them. These methods are futile, as proved by the large number of loose or missing wires and the very likely insecurity of all wires so assembled.

We ask your attention to the full sized picture A, which shows the form of the end of a rod or wire as we make it in our process of securing an indestructible joint.

Forms shown by A are re-formed to make them like B.

Forms shown by B are tightly closed by great pressure around the transverse rod C. Proper soldering then secures a symmetrical, indestructible joint.

This method is original and exclusive with us. Articles made in this way give the greatest security and value ever produced.

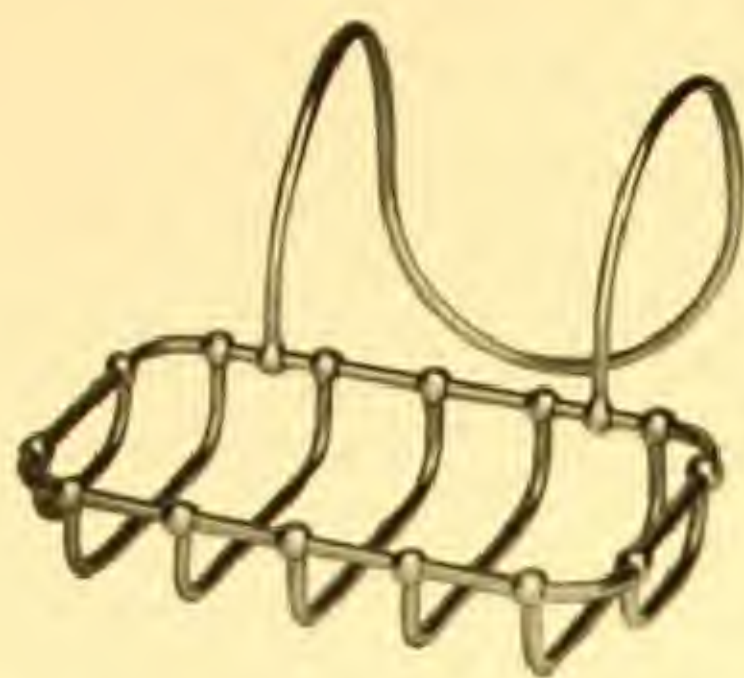

The Sponge and Soap, Bath Brush Holders and Towel Baskets shown in the following three pages are made with these indestructible joints. They are easily kept clean and adapted to retain all the implements of the bath, be they sponges large or small, a bath brush of any shape or size, the Turkish bath cloth, or even a cake of soap—either or all will find a resting place in our holders.

**The Prices Cover a Wide Range. The Designs We Believe Will Meet all Tastes. To Buy and to Use, They Are the Best**

## FACTS ABOUT TOWEL BARS

**A**LTHOUGH towel bars are among the simplest articles, our product is distinctive in that we have combined fitness in design, proper material and right construction. We use non-corrosive brass and glass in our bars. The joints, wherever desirable, are silver soldered, thus making them as strong as the material itself. The wall plates are immovably secured by flanged sleeves sweated in, which reinforce the joint much the same as a bicycle frame is made. The user, or dealer, is not taxed to readjust and put in line the several joints likely to be loose in bars made by the old method of threading the parts and screwing them together. Such threading removes some of the brass and makes a joint that is weak where it should be strong. Fitness requires simple designs, easily cleaned. It costs no more, often less, to make fancy cast pillars and finials. We do not use them, because they are hard to clean, and are thus a snare to health and a care to the user. Smooth surfaces and forms cost more to finish, are more sanitary and look like newly finished much longer.

Our 1500 series of bars are silver soldered, and come the nearest to being indestructible of any bars of similar diameter in the market. Series 1600 and 1900 have silver soldered joints. The short lengths of these bars are used for hand bars over bath tubs. The 1612 has been tested up to a pull of 600 lbs. The larger ones are correspondingly strong.

Hand Bars are a safeguard over all modern tubs to prevent accidental falls, and are a great aid to the heavy, sick or aged bather.

## FACTS ABOUT OUR PERFECTED GLASS TOWEL BARS

**H**ERETOFORE Crystal and Opal Glass Towel Rods with metal wall brackets have not been made so that they entirely exclude moisture and unclean deposits in the brackets, nor has the possibility of repair or replacement been considered. Both of these points are very important.

All glass rods as made for towel bars vary greatly in diameter and form on the ends, so that the two ends of an individual rod may be very different in size and shape.

This irregularity makes it impractical to make moisture-tight joints directly between metal brackets and the glass.

We have overcome these conditions and standardized our product by securely fixing on the ends of every rod a metal cap having a standard sized stud or projection perfectly adapted to fit the standard sized holes in our brackets.

Sanitary tight joints and facility for possible replacement of the glass are thus insured.

**In the Swing Bars shown below the rods are solidly cemented to the brackets.**

Glass Shelves are securely clamped in all of our Brackets and held about  $\frac{1}{8}$  of an inch from the wall, allowing the back edge to be cleaned. Glass Shelves in contact with the wall are very unsightly and unsanitary when dirt collects behind them. Patented July 17, 1906.

## Glass Shelves—Brass Brackets, Nickel Plated

Patented August 25, 1908

### No. 20 Brackets and Shelves

Crystal. $\frac{3}{8}$ in. thick.	No. 5630.....	5 x 18 in.	No. 5632.....	5 x 24 in.
	No. 5631.....	5 x 20 in.	No. 5633.....	5 x 27 in.

## Shelf and Rail

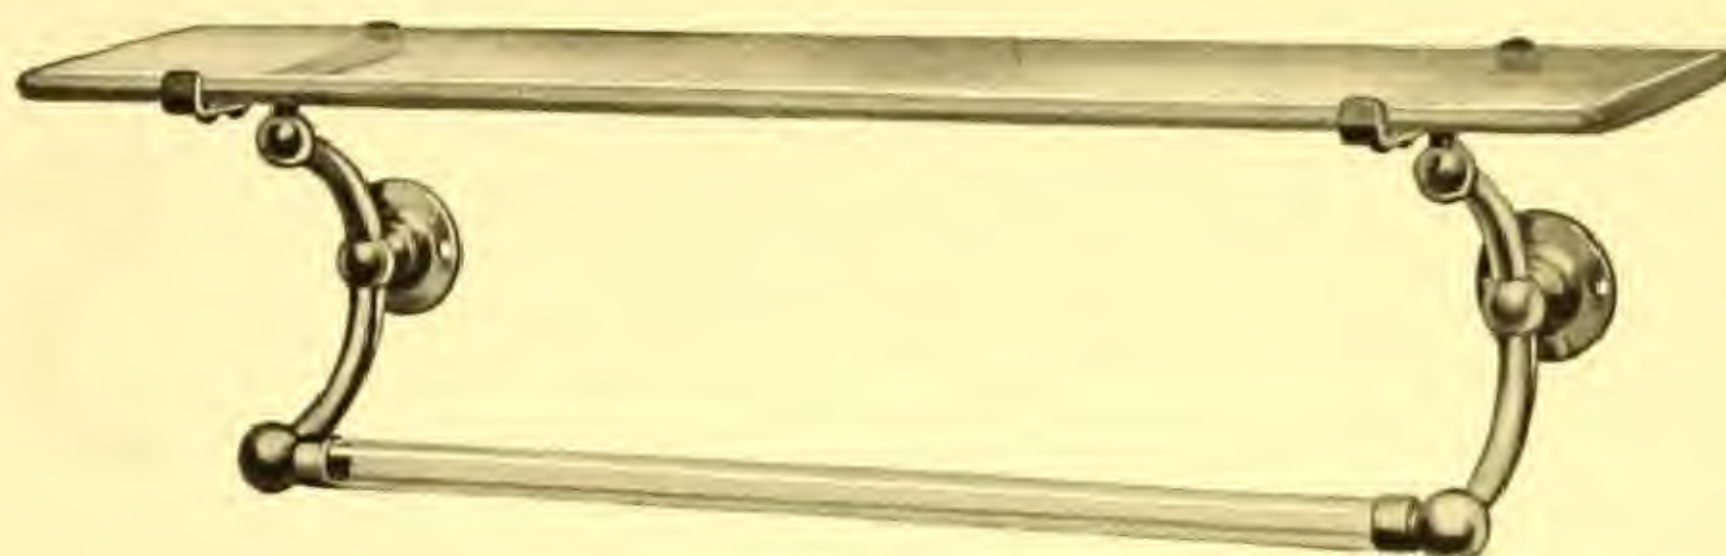

Shelf Rail clamps securely to back of shelf, swings on back pillars which allows it to be raised when cleaning. Rubber ball in pillar prevents possible damage to shelf if rail is dropped accidentally into place.

# Shaving and Boudoir Mirrors—Brass, Nickel Plated

Patented September 15, 1908.

Our Boudoir and Shaving Mirrors are made of the finest beveled French Plate Glass, with substantial mountings of brass, heavily nickel plated, these supported by gracefully curved arms adapted to wall plates. A ball and socket joint on the back of each mirror, and an adjustable socket on each wall plate allow the mirror to be rotated or adjusted by a touch to any possible angle.

No clamps or set screws are used. The natural friction of good mechanical joints maintains the mirrors as desired. If numbers 100 and 104 are accidentally broken, a new mirror plate, at a small cost, may be mounted. No tools required. No other toilet mirror has this feature.

See that *The Brasscrafters* <sup>TRADE MARK</sup> is stamped on the back of each mirror. *It is a guarantee of satisfaction and the greatest value.*

# Bath Tub Seats—Trimmings Nickel Plated

*Patented*

Seat and Head Rest

No. 1300.....Canvas, with Brass Nickel Plated Clamps. Adjustable to height and absolutely secure

No. 1204.....Oak. Adjustable to all roll edge tubs  
No. 1206.....White "Enamoid." Adjustable to all roll edge tubs

No. 1200.....Oak. Adjustable to all flat, round or oval edge tubs  
No. 1202.....White "Enamoid." Adjustable to all flat, round or oval edge tubs

Arms are nickel plated with covering of extra quality rubber tubing

Many who have never used a bath tub seat or head rest consider them unnecessary. Universal opinion, however, of those who have used a good seat is that they are a great convenience and many consider them a necessity.

They are a necessity for all ages, weights and conditions of people. By their use a foot bath may be enjoyed without disrobing, while a shower bath is doubly exhilarating, as it may be taken in a perfectly comfortable position. Children sitting astride may be bathed with ease and will be safe from slipping.

Our seats are constructed of the best materials throughout and all wood seats are finished with two coats of the finest spar varnish or three coats of white "Enamoid," which withstands the action of soap and water.

Our seats are at once the simplest and strongest seats on the market. There are no set screws or clamping devices used. The ends of the hangers are sheathed in metal slides. Adjustment for all widths of tubs is instantly made by a slight pull on the hanger.

The head rests are the original Trieber pattern.

# Bath Tub Seats—Brass Trimmings, Nickel Plated

## Extra Heavy

*Patented*

No. 1210 .....	Oak.	Adjustable to all Roll Edge Tubs
No. 1212 .....	White "Enamoid."	Adjustable to all Roll Edge Tubs

No. 1214 .....	Oak.	Adjustable to all Flat, Round or Oval Edge Tubs
No. 1216 .....	White "Enamoid."	Adjustable to all Flat, Round or Oval Edge Tubs

The seat is 7 x 17½ in. **OVAL** shape. The trimmings are extra heavy **ALL BRASS**, nickel plated.

The Hanger Arms are covered with heavy high grade rubber tubing to protect the edge of the tub, and prevent the seat from slipping.

The **OAK** is a natural quartered oak with three coats of the finest spar varnish. The **WHITE** is maple, finished with five coats of white "**ENAMOID**" which withstands the action of soap and water. These finishes are very fine and desirable.

Our seats are at once the simplest and strongest seats on the market. There are no set screws or clamping devices used. The ends of the hangers are sheathed in metal slides. Adjustment for all widths of tubs is instantly made by a slight pull on the hanger.

## "Sure Grip" Universal Faucet Bulbs

Patented

"SURE GRIP" Bulb

### OUR GUARANTEE

We guarantee the rubber in our "SURE GRIP" bulbs against cracking, splitting, or hardening for five years and will replace without charge all returned to us for these faults. Dealers, whether handling our goods or not, are authorized to do the same.

"SURE GRIP" Bulb with Chain

The greater the pressure the tighter the grip on all faucets from  $\frac{3}{8}$  in. to 1 in. The dome-shaped body is made of brass, nickel plated and holds a special *high-grade* rubber funnel-shaped washer. The metal and rubber parts may be instantly separated by any one without the use of tools. We make two sizes of these "Sure Grip" rubber washers—Small size, for faucets  $\frac{3}{8}$  in. to  $\frac{1}{2}$  in. diameter—Large size, for faucets  $\frac{1}{2}$  in. to 1 in. diameter. Will carry water at a faucet pressure of 60 pounds. Where faucet pressure is more than normal use "Sure Grip" Bulb with chain.

## IMPORTANT FACTS ABOUT WHITE GOODS

**I**N 1904 we were the first to make successful White Finished Brass Mirror Frames. This success led to a general inquiry and demand for a white finish on all bath room fittings. We recognized this demand, but experience and experiment convinced us that our mirror frame process of finish was not adapted to soap dishes, paper holders, towel bars, etc.; and we were therefore compelled to seek another method, before we could place upon the market a really good, worth-the-money product, to which we were willing to attach our trade-mark and guarantee tag.

Metal articles finished by the common commercial white finishing processes were not worth putting in a bathroom, even if acquired without money cost. They soon became unsightly and unclean. A slight blow, as when a tumbler is set in its holder, would chip the paint, thus exposing the metal itself. If it were brass, verdigris soon formed, staining the finish around the injured spot. If the injured article were steel, rust soon appeared. We all know what a rusty nail will do to a damp towel in a few minutes.

With all this demand we have not forgotten our responsibility to the consumer and in answer to demands for White Goods, we have hitherto been compelled to state that no white finish for this class of goods had yet been produced, which was worth its cost to the ultimate consumer. Finally, after nine years, we have *succeeded*—not by any of the above mentioned commercial processes, but by an entirely new and distinctly different method—in producing the **WHITE** which we are justified in guaranteeing.

White goods for the bathroom must possess the two characteristics—*beauty* and *durability*. Regarding the former the **WHITE** will speak for itself. Regarding the latter you are protected by our guarantee. Cleansing with warm water and soap will remove oils, grease, perspiration, fly specks, indelible ink, copy pencil stains, etc., etc. It stays white and does not require scrubbing or scouring to keep it spotless.

The customer should bear in mind that any white surface, be it paper, silk, paint, enamel, or ivory, soon shows the effect of soil and abuse. However, this fact does not necessarily detract from its value. You are compelled to treat your watch with a certain amount of respect, yet you would not dispense with the same for this reason. The same applies to our White Bathroom Fixtures. Given the natural reasonable care which a beautiful article merits, they will last for many years.

We know from test and experience that our **WHITE** has a six, eight, or ten times greater factor of safety against chipping than any other white now on the market, and we do therefore guarantee it for legitimate use.

Concha-head screws for putting up **WHITE** fixtures are packed with each piece.

## FACTS ABOUT MIRRORS

**W**HO does not know or believe that a wood frame in a Bath Room, the place of all places where water, vapor and steam abound, must absorb moisture. It is a fact that the highest priced enameled or coated wood mirror frame absorbs, swells and shrinks, and sooner or later is ruined by the opening of its joints. Decent repair is not practical and the investment is lost. A rigid, seamless non-corrosive metal frame is an everlasting substitute for a wood frame, and a permanent investment. We have perfected metal mirror frames of many sizes and forms, finished in **WHITE** which does not chip off, change color with age, and is easily kept clean. They have metal backs, are moisture proof, and are mounted and arranged for hanging by our standard methods. Their sanitary features are notable, and the finish truly beautiful and practically everlasting.

## FACTS ABOUT "STRUCTURAL" MIRRORS

**T**HIS design of mirror marks the greatest and most recent advance in metal frame mirrors. Indeed, it is in a class by itself. The old mirror was something foreign; an addition to a room; beautiful and appropriate, but still something hung up, or tacked on the wall. This new mirror has a frame with a moulded web or flange at the outside border. This cut shows a full size cross section. This web, or flange, is not mitred at the corners, but like the frames of all our mirrors, is wrought of one piece, and it is this web or flange on the border of the mirror frame which makes the whole a structural part of the panel, or wall, whereon it is placed. Moreover, this mirror, with its frame fitting close to the wall, does not allow dust to gather on its back or contour. This, together with its other cleanly features, make it sanitary in the highest degree. No openings or changes are required in marble or tile walls to install these mirrors and make them a part of the structure.

## Sanitary Steel Medicine Cabinets

Graphic illustration of Nos. 16020, 16030 and 16031, as specified on pages 65 and 66

### DESCRIPTION

These cabinets are made entirely of steel secured from corrosion by application of a process approved by U. S. Government.

The durable finish is the **WHITE**

The shelf rests are securely fixed, but instantly adjustable. (See sectional cut.)

The two shelves are pure white Vitrolite glass, impervious to acids and chemicals.

The mirror door is plain French plate glass, in seamless metal frame, with moisture pad, flush-fitting metal back, china knob in combination with spring catch, concealed hinge flanges, and loose pin for convenience in detaching the door.

The body and moulding are integral, thus securing a cabinet without joint, seams or cracks.

These cabinets require no finishing, either inside or outside, at the building. They are delivered ready for immediate installation, which is completed by using two wood screws in holes provided in the middle of the vertical sides.

Our shelves may be securely clamped in the brackets and are held about  $\frac{1}{8}$  of an inch from the wall, allowing the back edge to be cleaned. Glass shelves in contact with the wall are very unsightly and unsanitary when dirt collects behind them. Patented July 17, 1906.

Patented January 6, 1914

In Position in Wall

## Recess Sanitary Toilet Paper Holder

### An Addition to Our Line

This Recess Pattern Toilet Paper Holder is adapted for standard size paper, and can be installed without cutting standard size tile.

Opening required for installation 6 in. x 8 in. x  $2\frac{3}{8}$  in.

Steel hinged leaves (4 in. wide) on the inside carry and balance the box. No outside hinged joints or springs are used.

Finished inside and outside, ready to be anchored in the wall by simply setting two  $\frac{7}{8}$  in. No. 7 wood screws in the vertical sides.

It is a beautiful, rugged and everlasting fixture.

No. 15475. Cold-rolled steel, guaranteed against corrosion

The guaranteed finish is the **WHITE**

# The Brasscrafters

The Dressing Bench is a requisite in fine bathrooms. The large seat is of especial convenience for placing pedicure requisites. It is particularly useful to the attendant or mother in the care of a child. And there are many other uses for persons of all ages.

No. 14515 . . . . . 26 in. long, 14 in. wide, 15 in. high

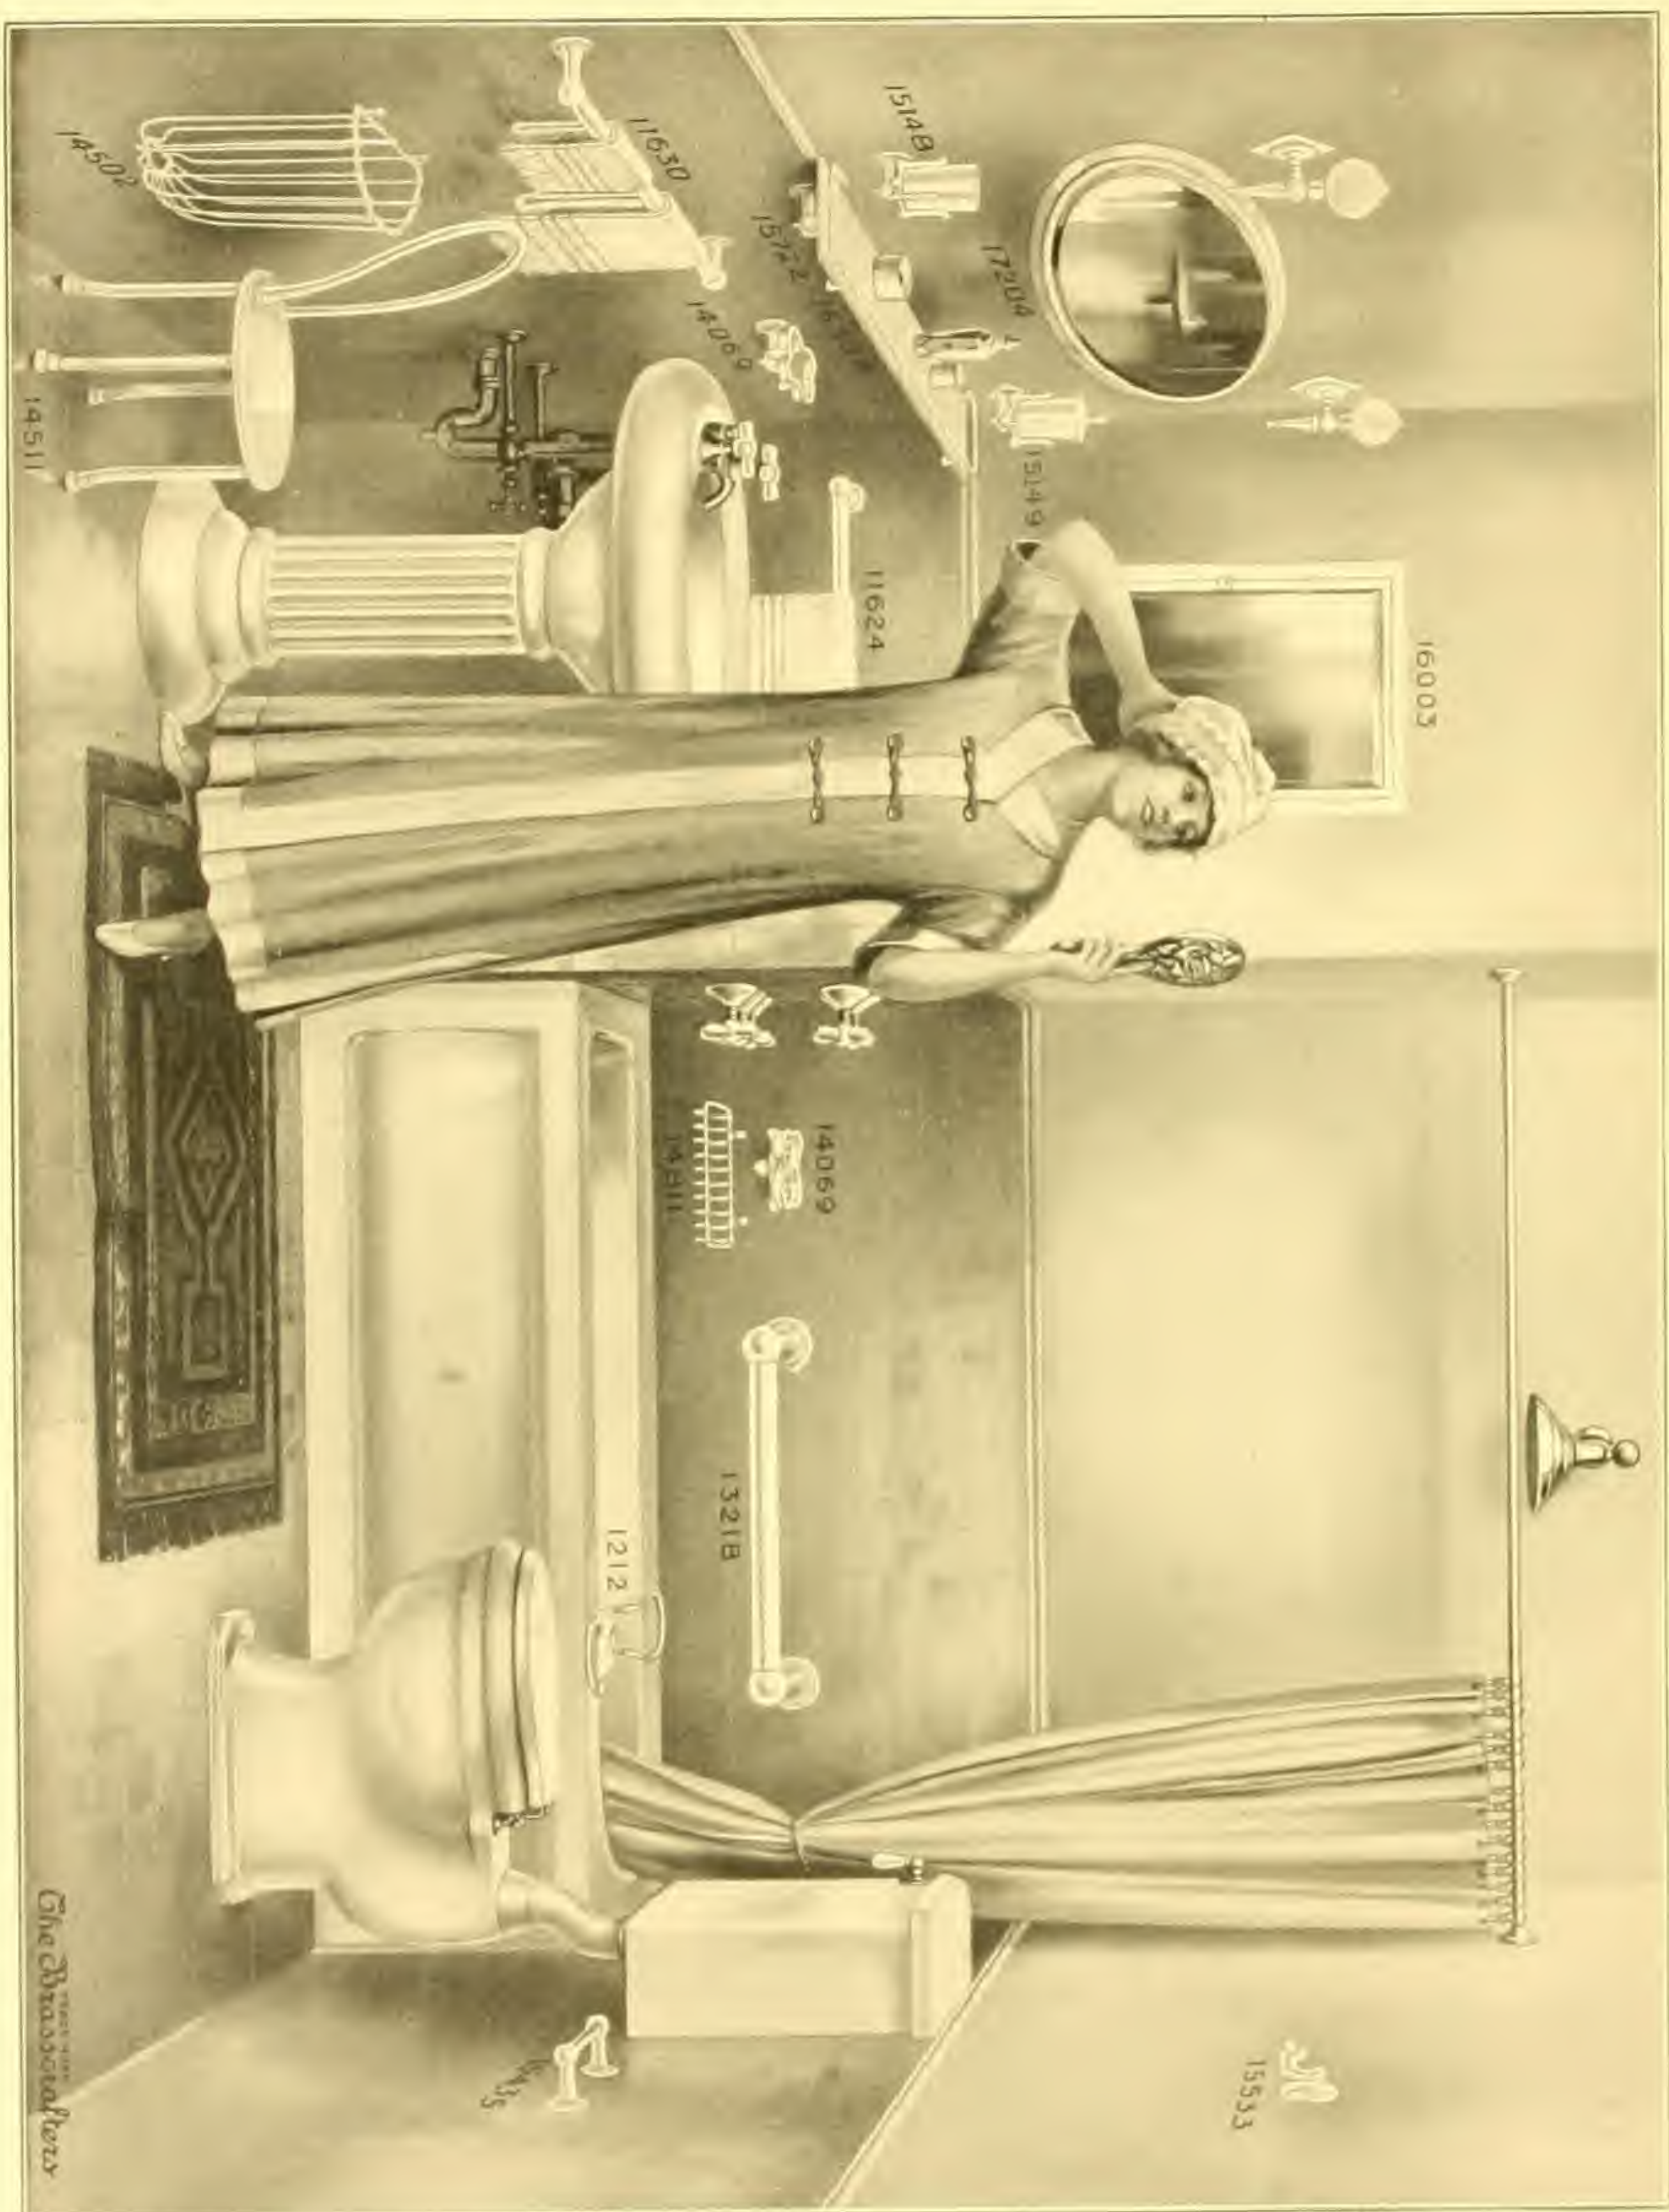

No. 14510 . . . . . 14 1/4 in. high

No. 14511 . . . . . 14 1/4 in. high; with back, 15 1/4 in. high

Our stool and chair seats are of symmetrical shape, light weight, and beautiful white finish. They are made of several layers of hard wood, grain diagonal in each piece, the several layers cemented together under tons of pressure, making one solid indestructible piece. The legs are made of seamless metal tubing secured to and in the seats by inserting the leg in a perfect fitting hole in the hard wood and using three screws through a flange which is sweated to the tube. The factor of strength and safety is, say 1,000%. The tips are made of red rubber in the form of solid balls forced or sprung into brass sockets, forming a water-tight union.

### BATH ROOM WITH WHITE DE LUXE ACCESSORIES

Direct your architect to specify in your plumbing contract De Luxe requisites, as located by the numbers shown.  
A bathroom equipped with these requisites is a distinguishing feature in the finest home
